

Quarterly Media Report

January - March 2023

News stories about student-scientist Bobbi Wilson being honored by Yale and the Humanitarian Research Lab investigating potential war crimes in Ukraine dominated Yale School of Public Health media coverage from January through March 2023. But there was plenty of other coverage that also was noteworthy.

Highlights include Albert Ko and Xi Chen discussing the fallout from China's "zero-COVID" policy; Peter Krause discussing a rise in babesiosis in the Northeast; and Becca Levy discussing how a positive attitude about aging can help you live longer.

Overall, YSPH was mentioned in 2,800 news stories that had a potential reach of 88 million people, according to Cision marketing communications software.
