Becoming Breastfeeding Friendly Myanmar

The BBF Initiative guides countries in assessing current breastfeeding policies and practices and scaling up interventions to strengthen breastfeeding promotion, protection, and support.

*Key Recommendations From The 2018 Assessment*

- Form a National Infant and Young Child Feeding Alliance
- Mobilize a cohesive national network of advocates to develop and implement a national advocacy strategy
- Increase availability and utilization of breastfeeding data by developing routine monitoring systems and conducting periodic household surveys at sub-national and national level
- Strengthen breastfeeding promotion by revising the communication strategy, developing breastfeeding promotion standards, and leveraging mass media
- Update and strengthen lactation counseling during pre- and in-service training for health service providers and volunteers at facility and community levels, with a focus on interpersonal communication
- Increase human resources allocated to support breastfeeding and provide certified lactation support
- Strengthen implementation and coverage of the Baby Friendly Hospital Initiative by mandating the inclusion of key elements of the Ten Steps into hospital accreditation
- Adopt full provisions of the International Code of Marketing of Breastmilk Substitutes and strengthen monitoring and enforcement of the Order of Marketing of Formulated Food for Infant and Young Child
- Revise legislation for maternity leave and protection to include at least six months of paid leave in all sectors, clarify the terms of maternity leave, and protect pregnant and lactating women from workplace discrimination

‘Breastmilk is the first food for babies. Breastfeeding can reduce family expenditures on health care as babies are healthier. At the policy level, breastfeeding contributes significantly to national development. Thus, we need to encourage breastfeeding.' - Dr. Myint Htwe, Union Minister, Ministry of Health and Sports (MoHS)
Becoming Breastfeeding Friendly

Breastfeeding in Myanmar
In Myanmar, exclusive breastfeeding among infants under six months of age increased from 23.6% in 2010 to 51.2% in 2016, demonstrating the country’s potential to rapidly improve life-saving nutrition behaviors. Despite progress, however, there is still work to be done: early initiation of breastfeeding within one hour of birth decreased from 75.8% to 66.8% during the same period and continued breastfeeding and one and two years of age also decreased slightly.1,2

The Ministry of Health and Sports (MoHS) is committed to facilitating an enabling environment for breastfeeding. MoHS has promoted WHO recommended breastfeeding practices by adopting the International Code of Breastmilk Substitutes, implementing the Community Infant and Young Child Feeding counseling package, expanding the Baby Friendly Hospital Initiative, and providing longer maternity leave for civil servants in collaboration with other stakeholders. Most recently, MoHS led the Becoming Breastfeeding Friendly (BBF) Initiative, launched in Myanmar in January 2018.

BBF in Myanmar
A working group of 17 health and nutrition experts convened to implement and support the BBF initiative. Becoming Breastfeeding Friendly (BBF) assists countries to:

- measure the current breastfeeding-friendly environment; and
- develop a plan and recommendations to guide the scale up of national breastfeeding protection, promotion, and support efforts.

BBF provides countries with a toolbox that includes a 54-benchmark indices to assess the 8 gears in the Breastfeeding Gear Model, as well as case studies and a five-meeting process that guides countries through the process of scaling up breastfeeding (Figure 1).3

BBF Findings in Myanmar
- The overall breastfeeding scale-up environment was identified as moderate, with a score of 1.2 (see Table 1 for interpretation).
- Funding & Resources, Coordination, Goals & Monitoring, Advocacy, and Research & Evaluation were identified as the weakest processes with the lowest scores.
- Political will is the best performing gear with the highest score of 2.0, ranking as moderate strength (Figure 2).
- Nine overarching recommendations were developed and prioritized by the country working group based on the Myanmar context and BBF findings (see reverse side).
